***FIRST-OF-ITS-KIND INTERACTIVE SAVINGS CALCULATOR HELPS CONSUMERS
AVOID THE BLIZZARD OF HEATING BILLS***

SOUTHBOROUGH, Mass., Oct. 3, 2006 – There's no doubt that the price of oil and heat this fall and winter will continue to skyrocket, leaving less cash in the bank for other needs. However, heating your house doesn't need to leave you out in the cold. Calculate your heat savings this winter by logging onto www.honeywellheatsavings.com. This new, first-of-its-kind interactive calculator enables you to quickly and easily see how much money you can save by lowering your thermostat just a few degrees and supplementing your central heating system with safe and affordable portable heaters.

Did you know that the average annual cost to heat a sample house* at 70 degrees is \$1,700? It only makes sense to heat the rooms in which you spend the most time, rather than the whole house. Portable heaters can supplement your central heating, keep drafty basements or workshops warm and create a personal level of comfort in whatever room you're in. By lowering the temperature in a house by just a few degrees, you can potentially save more than \$200 in heating costs per year! Think of that as eliminating one whole oil or gas bill for many homeowners!

"Honeywell portable heaters help consumers save money on their heating bills. Whether it's the in-between months when your heating system isn't on full blast or the dead of winter, portable heaters keep you warm without the winter freeze of heating bills," says Kelly White, product manager and official "heat miser" for Honeywell brand portable heaters.

Simply log on to the calculator and follow these four easy steps: 1) Change the first thermostat to your usual standard heating temperature; 2) Select the state you live in; 3) Adjust the second thermostat down to a lower setting (typically between 62-64 degrees); and 4) View your savings.

The Honeywell Heat Savings web site also offers you tips on how to choose the best portable heater for you and outlines tips on how to use your portable heater safely, protecting you and your family. Additional energy savings tips are available. A store locator is also available for easy purchasing.

For more information on Kaz's line of Honeywell portable heaters, visit www.Honeywellheatsavings.com or www.kaz.com. Kaz is a global manufacturer and marketer of portable heaters under the Honeywell brands. The Honeywell trademark is used by Kaz, Inc. under license from Honeywell intellectual Properties, Inc.

* This example is based on an average 1500 square foot house.
